Dear Microsoft HR,

Hello, this is Yuhang Chen and please feel free to call me Tony. I am a junior computer science student at Oregon State University. I am a top student and my GPA is 3.87.

In my part-time, I worked as a CS TA to teach a fundamental C++ class. I believe that I have good communication skills based on my TA experience. In this past 2019 year, I did a 6 months internship from spring to summer at Electro Scientific Industries through the MECOP program. As a software engineer intern, I owned a C# project to add a new feature to a hardware machine. I built software to collect more than 10,000 data from the machine and applied multiple different ML algorithms on the data. I implement the 'Peak and Valley detection', 'Polynomial fit of the curve', 'Normal distribution fit', 'Logistic Regression' algorithms.

I am looking forward to being a software engineer intern at Microsoft in 2020 summer. I grow up using windows and I am using the surface book now. I love the Microsoft product and Microsoft is my dream company too!

I would love to get a chance to show my ability!

Sincerely,

Tony
